

## OPTICS

### Overview

SEACAM viewfinders are extremely bright and make precise focusing, accurate depth of field control and ideal image composition easier than ever before.

In conjunction with experts from the optical industry we developed these viewfinders for requirements under water. Special optics show you an up to three times enlarged viewfinder image in spite of the diving mask and makes image composition much easier. All viewfinders are easily and quickly removed for transport, sealed hermetically, easily exchanged without the need for tools and can be fitted at a later stage.

### SEACAM PRO G

The smallest viewfinder in the product range has a precisely adjustable Galilei optical technology offering a brilliant view. The SEACAM PRO G Viewfinder decreases the viewfinder image slightly but in spite of the diving mask shows the entire viewfinder image and the displayed data. The camera's diopter adjustment retains its full function.

100% image field with a 25% viewfinder reduction.

### SEACAM S180 Sportsfinder

The SEACAM S180 Sportsfinder has a straight view, is light intensive and brilliant like the S45 Sportsfinder. With a triple viewfinder image enlargement and a diopter adjustment of  $\pm 3$  this viewfinder is ideal for a quick and precise aiming. This viewfinder is also rotatable and can thus be positioned almost in the camera's optical axis.

100% image field with a triple viewfinder image enlargement.

### SEACAM S45 Sportsfinder

The SEACAM S45 Sportsfinder with the comfortable  $45^\circ$  view has been the groundbreaking development in underwater photography for 10 years. In spite of having been copied many times, the SEACAM S45 is unrivalled in its brilliance and image size. In terms of comfort it offers a substantial advantage not only in macro photography. Tilting the viewfinder at a  $45^\circ$  angle is the only way of guaranteeing environmentally friendly photography even close to the ground. This development which was realized

for the first time for standard viewfinder cameras, enlarges the viewfinder image threefold, it is light intensive and brilliant and shows all information true sided in the image margins. Very practical is the S45 Sportsfinder's ability to be rotated infinitely with 4 snap locations on the housing for a quick change between landscape and portrait formats. For those needing glasses, the sports viewfinder can be adjusted to  $\pm 3$  diopters. 100% image field with a triple viewfinder image enlargement.
