# SEACAM cinema Atomos Ninja V

For the new monitor series we have chosen the Ninja V model Atomos to match your SEACAM housing - for more ease of use and versatility on your underwater adventures. As usual, the design is kept plain and simple and limited to the most important functions.

The compact monitor can be operated intuitively thanks to the well thought-out arrangement of the control elements. The connection on the underside allows for a quick and easy installation on the housing. The housing offers additional space for the Sony NP-F 970 battery and thus guarantees ideal performance. The housing is HDMI 2.0-capable thanks to a specially developed plug connection and transmits data securely and stably. The removable sun visor offers additional comfort in difficult light conditions.

## FUNCTIONS
